What's Up with CUP?

Session Date: 01/25/2022

Session Time: 11:00 – 11:45 AM (CST)

Target Audience

This continuing education (CE) session was planned to meet the needs of professional staff who deal with the selection and monitoring of medication(s) as part of their patient care duties, including pharmacists, RNs, APRNs, PAs, MDs.

Activity Overview

Cancer of unknown primary (CUP) site is a heterogeneous group of cancers for which the anatomical site of origin remains unknown after detailed investigations. The emergence of more sophisticated imaging, immunohistochemical testing, and molecular-profiling tools has influenced our approach to unknown primary cancer. In the era of tailored therapeutic strategies, this situation presents both an opportunity and a challenge. This presentation will review recent literature regarding the utility of molecular profiling as a tool to guide treatment.

Learning Objectives

At the conclusion of this knowledge-based CE session, participants should be able to:

1. Identify presentation, prognostic factors and pathology associated with cancer of unknown primary
2. Review historical treatment approaches
3. Discuss the role for use of molecular profiling to guide treatment
