## Dual Antiplatelet Therapy Following PCI: Choosing a SMART-DATE to STOP-DAPT

**Session Date:** 06/07/2022

**Session Time:** 11:00 – 11:45 AM (CST)

### Target Audience

This continuing education (CE) session was planned to meet the needs of professional staff who deal with the selection and monitoring of medication(s) as part of their patient care duties, including pharmacists, RNs, APRNs, PAs, MDs.

### Activity Overview

Dual antiplatelet therapy (DAPT) following percutaneous coronary intervention in both acute coronary syndrome and stable ischemic heart disease is the standard of care to reduce the risk of post-intervention cardiovascular events. However, growing concerns have been raised on the increase in bleeding events associated with prolonged DAPT therapy, and much the rationale for current guideline recommendations is derived from trials conducted prior to the implementation of newer-generation stent technology. This presentation will review current literature comparing various shortened DAPT duration strategies to the current standard duration of therapy.

### Learning Objectives

At the conclusion of this knowledge-based CE session, participants should be able to:

1. Describe current guideline recommendations for duration of dual antiplatelet therapy (DAPT) following percutaneous coronary intervention
2. Compare and contrast strategies for antiplatelet regimens for reduced duration DAPT
3. Select an appropriate duration of therapy when utilizing shortened DAPT
