

Pediatric Updates on Transplant Associated-Thrombotic Microangiopathy (TA-TMA)

Session Date: 06/21/2022

Session Time: 11:00 – 11:45 AM (CST)

Target Audience

This continuing education (CE) session was planned to meet the needs of professional staff who deal with the selection and monitoring of medication(s) as part of their patient care duties, including pharmacists, RNs, APRNs, PAs, MDs.

Activity Overview

Transplant associated-thrombotic microangiopathy (TA-TMA) is a life threatening complication after hematopoietic cell transplantation (HCT). Complications may result in acute injury to the vascular endothelium by chemotherapy, radiation, infectious pathogens, and/or immune dysregulation causes target organ injury or multiorgan dysfunction syndrome (MODS). Very poor clinical outcomes for untreated TA-TMA with multiorgan dysfunction syndrome necessitates the need for prompt diagnosis and interventions. This presentation will outline clinical presentations, manifestations, and goals of therapy in pediatric patients diagnosed with TA-TMA.

Learning Objectives

At the conclusion of this knowledge-based CE session, participants should be able to:

1. Review and identify the pathophysiology, clinical manifestations, and diagnostic criteria for TA-TMA in pediatric patients
2. Differentiate risk factors associated with TA-TMA and discuss prophylactic treatment in pediatric patients
3. Explore treatment and emerging therapy options of TA-TMA in pediatric patients
